

Apple Automator Workflow for Python Myanmar Converter

Installing Python Myanmar

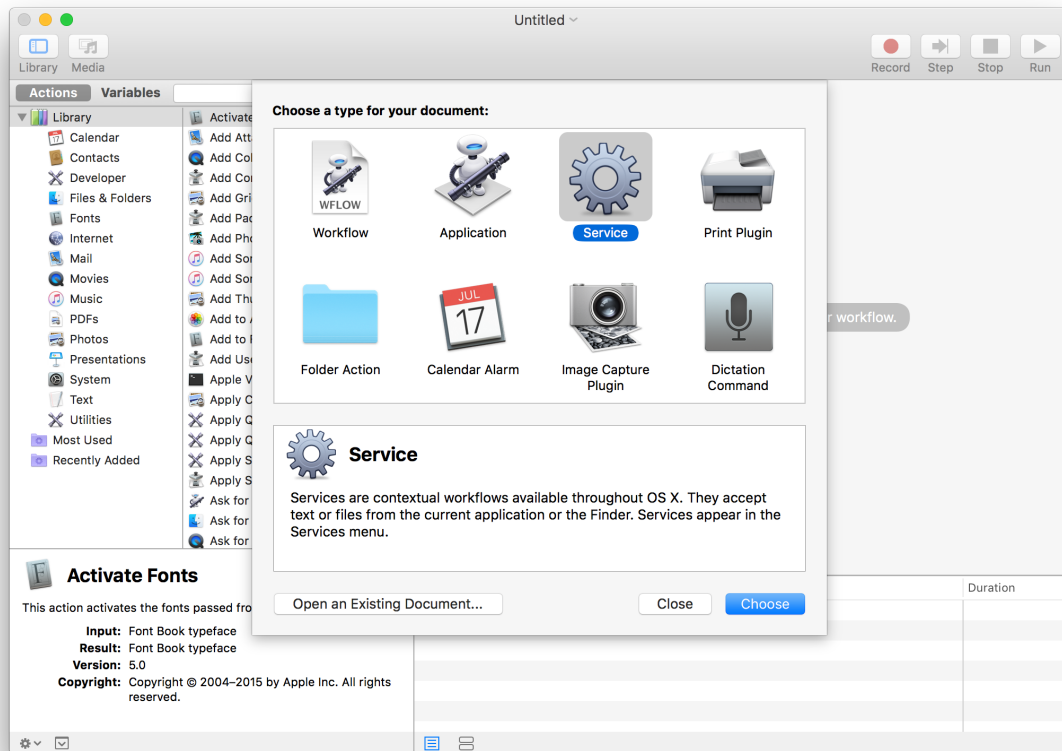

- Open **Terminal**
- Run following commands one by one
 - `curl -O https://python-myanmar.googlecode.com/files/python-myanmar_0.0.2-0.tar.gz`
 - `tar -zxvf python-myanmar_0.0.2-0.tar.gz`
 - `cd python-myanmar`
 - `sudo python setup.py install`

Creating Apple Automator Workflow

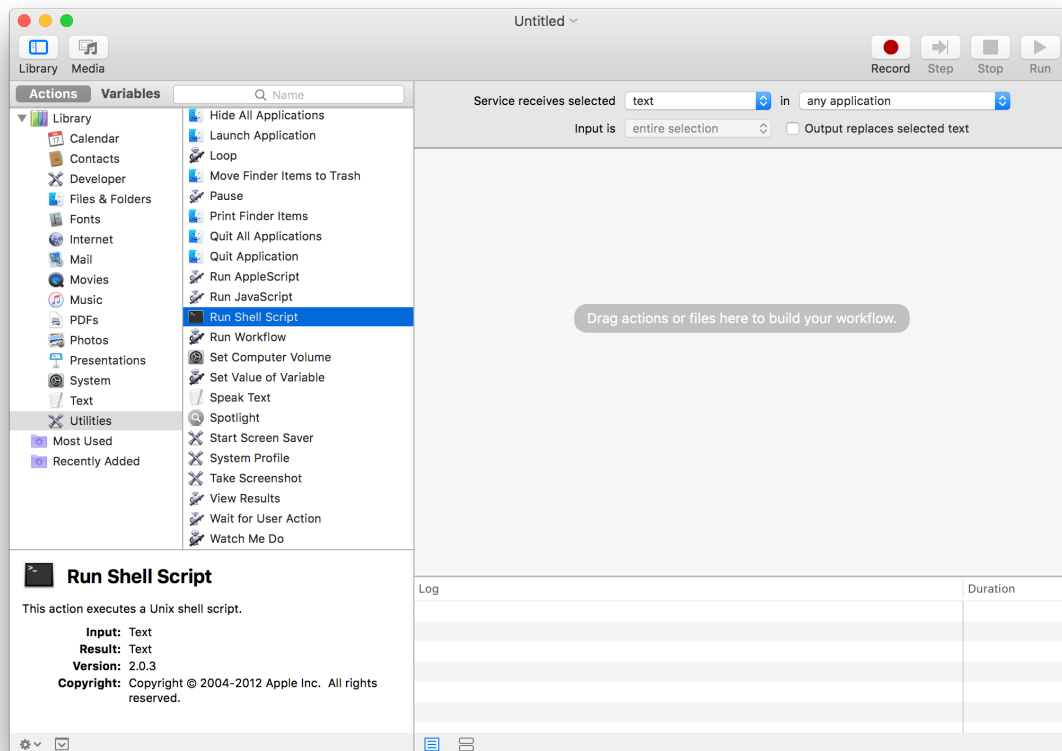

- Open **Automator** and click **New Document**

- Select **Service** and click **Choose**

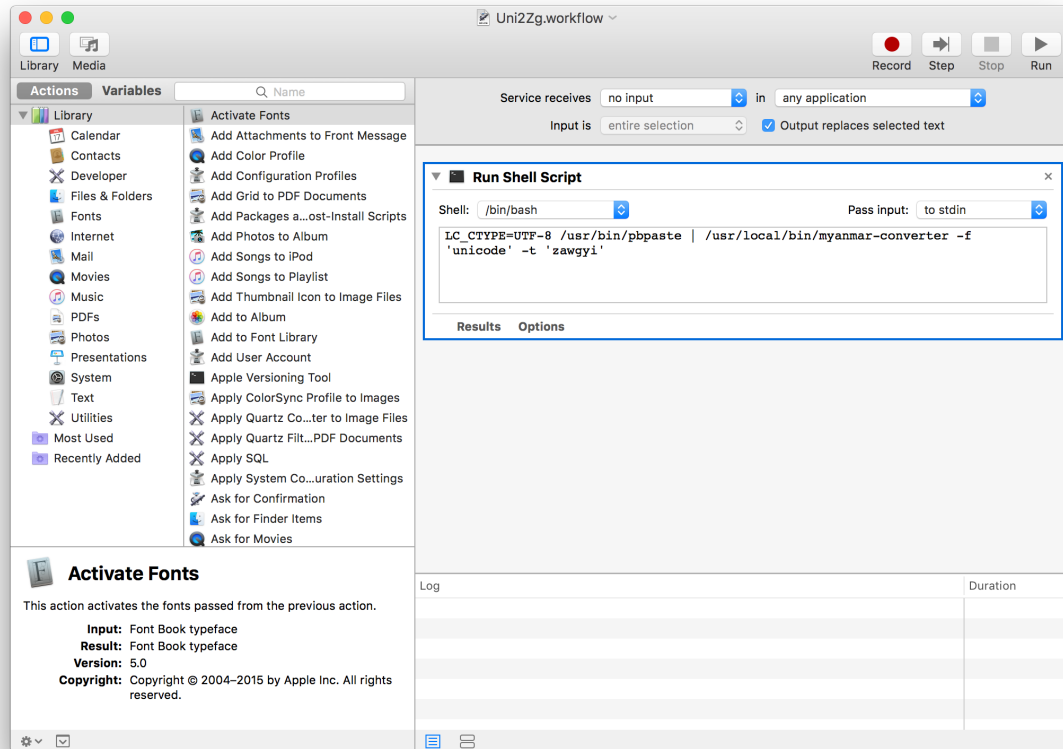

- Double click on **Run Shell Script** from **Utilities** Library

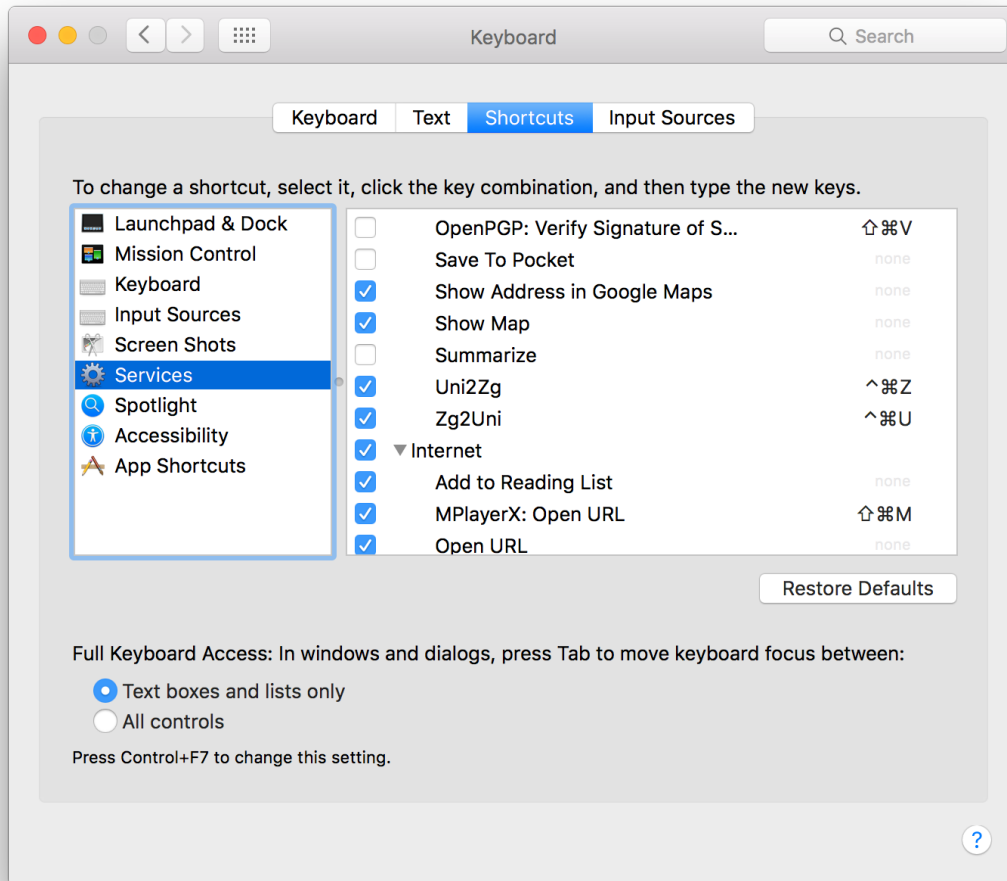

- Choose - Service receives: **no input** in **any application**
- check **Output replaces selected text** option

- Choose - Shell: **/bin/bash**
- Choose - Pass input: **to stdin**
- Paste following in script box -
 - `LC_CTYPE=UTF-8 /usr/bin/pbpaste | /usr/local/bin/myanmar-converter -f 'unicode' -t 'zawgyi'`
- Save as **Uni2Zg**

- Enable **Uni2Zg** in **System Preferences > Keyboard > Shortcuts > Services** and set Shortcut Key.

Notes

- For **Zawgyi to Unicode** setup the same as above with following script
 - `LC_CTYPE=UTF-8 /usr/bin/pbpaste | /usr/local/bin/myanmar-converter -f 'zawgyi' -t 'unicode'`
